

Hybrid E190 architecture (single member)

FiLM-SIREN + Binaural Spectral CNN residual refinement

SINGLE-MEMBER SCOPE

This figure shows one Hybrid E190 member only. The final release averages 3 equal-weight E190 members.

Frozen FiLM-SIREN provides the base residual, while the spectral CNN predicts a binaural delta residual.

Shape convention: per-direction spectral batching (N = F); subject conditioning is broadcast as needed. Implementation grid output: [2, D, F].
